Professional Experience

ML Intern

Privaseverse

07/2025 – 12/2025

- Automated IPv4 validation, data extraction, log monitoring and frequency analysis with Python improving processing efficiency by 30%.
- Tokenized and preprocessed cybersecurity datasets for anomaly detection and adversarial attack modeling.
- Configured GPU enabled cloud training environments and optimized Transformer model pipelines (GPT/LLaMA).
- Implemented Git based version control workflows and automated deployment scripts for ML models.
- Containerized ML workflows using Docker for reproducible deployments.
- Designed miniature Transformer architectures using BPE tokenization, positional encoding and attention mechanisms.

Courses

DevOps Learning Path (Oracle Cloud Infrastructure)

Oracle Race to Certification

10/2025 – 11/2025

Gained hands-on experience in Devops Fundamentals, CI/CD automation, containerization with Docker and Kubernetes (OKE), Infrastructure as Code using Terraform, and implementing DevSecOps and observability in Oracle Cloud Infrastructure.

Profile

DevOps Engineer skilled in CI/CD pipelines, cloud infrastructure (AWS & OCI), infrastructure as code and automation. Experienced in Docker, Kubernetes, Terraform, GitHub Actions and AWS services with practical exposure to ML workflow deployment. Strong in scripting, cloud provisioning and secure, scalable environment setup. Seeking to build reliable, automated and production ready DevOps systems.

Languages

- English
- Hindi
- Urdu

Programming Skills

- Python
- C
- SQL
- Shell Scripting

Tools

VS Code
AWS-(EC2,S3)
Git
Docker
Containerization
OpenWebUI
Ollama

Libraries

Numpy
Pandas
Scikit-learn
PyTorch
Matplotlib
FastAPI

Projects

MicroGPT

FastAPI, Transformers, NLP, OpenWebUI

- Built and trained a GPT-style language model from scratch using PyTorch, implementing tokenization, embeddings, positional encoding, multi-head self-attention, transformer encoder blocks and auto-regressive text generation.
- Trained the model on a 50,000-conversation chatbot dataset and implemented multiple decoding strategies, including greedy, top-k and beam search to improve response generation.
- Developed and deployed an OpenAI-compatible FastAPI REST API enabling seamless integration with AI clients and external applications.
- Integrated the model with OpenWebUI allowing users to interact with the deployed model through a web-based chat interface.

A.R.I.A

Major project

Cloud-Ready Python Voice Assistant

2025

- Developed a Python based voice assistant using speech recognition, TTS and secure token based API integration.
- Containerized the application using Docker and deployed on cloud instances for testing.
- Implemented CI workflows to automate dependency installation and testing.

Virtual Control System (VLS)

IoT & ML

2024

- Built an ML driven gesture and retina tracking IoT system with real time detection.
- Deployed models using Docker containers for consistent runtime environments.
- Integrated event driven control architecture and logging for system monitoring.

AI/ML

- Transformers
- Natural Language Processing (NLP)
- Tokenization
- Large Language Models (LLMs)

Education

Bachelor of Engineering (B.E.) – Computer Science Engineering

Nawab shah alam Khan college of Engineering and Technology

2021 – 2025

Intermediate

2019 – 2021

SSC

2019
